Advantages and disadvantages of mobile phones in points pdf free pdf

HISTORY OF THE CELL PHONE

LANDON DOWLATSINGH

"Hello. Speaking. Uh, excuse me but please call me later. Yes. Byel"

I'm sorry for stopping my speech. Since I've got this mobile phone, I have been very busy. Do you own one yourselves? Whether you own it or not, be careful about it, because mobile phones are a new type of "weapon". They are also a new type of "pets"! Have you heard of that? No? OK. Listen to this!

The first key word of my speech is, "weapon". You may not have recognized that mobile phones are a kind of weapon, but they attack us anytime and anywhere! They attack us in two ways; physically and mentally. First of all, mobile phones attack us physically by electromagnetic wave. Professor Hiland at Woric University said electromagnetic wave weakens our memory, concentration, and health conditions.

Secondly, they attack us mentally by "eating" our time like "pets". Yes, the next key word of my speech is, "pets". Mobile phones are a kind of pet, a very selfish pet. You have to take care of them whenever they cry. You cannot concentrate on your job or study because of them. This problem is more remarkable among young people. The only time they stop pushing the button is when they are taking the subway, where luckily they cannot use their phone. Mobile phones must be the evilest thing we have ever met.

But, wait is it really true? Mobile phones must have some ments. If not, we cannot explain why more than 66% of Japanese people own one.

Now I'd like to make certain of my stance toward mobile phones. I am a member of those 66%. Yes, I support having one. I even hope all people would get mobile phones. Not "most" but "all" except babies. If all people had mobile phones, it would be very easy to find where people are. For example, when senile people or innocent children go missing, the guardians can make sure where they are by using satellite-based positioning system. Or, it must be tresh in your memory that some people tried to be helped under the rubble of World Trade Center. Not only that, there are many great examples of the advantages of mobile phone. Sometimes the log of mobile phones become the evidence of the crime. In the event of emergencies, we can make contact with our family thanks to our mobile phone. In this way, mobile phones are a very good, and convenient, the crown of science and technology! How wonderful it is!

The most serious problem is that we DON'T notice not only the danger but also the mental We only know the menta superficially, because there are no education about mobile phones though primary school children have it. Some parents allow their children to own them without education, and others don't allow them to own them without consideration. They don't know about mobile phones except how to make a phone call or how to send e-mail. To improve this situation, the Japanese Government should introduce mobile phone education into primary school moral classes, and teach children both their merits and demerits. It will improve children's moral consciousness and children can take moral responsibility when using mobile phone.

Now let's consider the advantage and the disadvantage as I told you before and weigh the positive against the negative. If you still wonder whether you should have a mobile phone or not, I'd like to add one more idea that will release you from the anxiety about electromagnetic wave.

According to the American congressional investigators, the strength of the electromagnetic wave from mobile phones is too weak to affect us in short period use though the strong wave may cause health problems. So don't hesitate to have and use them! If you have time to hesitate, you should buy it just in case.

Oh, there is still one more big problem. That is "financial" problem. The cost to maintain one is still high! As for this point, I have one suggestion. The Japanese government should lower the cost by supporting mobile phone companies. It is a solid investment to contribute to the work of police. If the price is reduced, all nations could own mobile phones, and lead a safe life!

Some say that the world would be a better place now if the automobile had never been invented.

Imagine that you have to go to your office, which is five kilometres away by walk. And you got up late from bed and your boss yells at you if you are late by a few minutes. Then what do you do? I hope there will not be any unfortunate person than this in the world. So, I personally feel and believe that we are very fortunate to have automobiles invented and prepared for us. So, I do not support the statement that the world would be a better place without automobiles.

To be honest, I personally feel that automobiles are a boon in today's world. In this age of rapid technological advancements, we must run along with time. Otherwise time will leave us behind and will proceed at its own pace. So, in order to cope up with time we must also be faster and that is possible only with the help of automobiles. If there are no automobiles practically I feel it is not possible to achieve this. Automobiles today have replaced the old buffalo carts of the past, which are used for transportation of goods as well as human beings. To reach a destination, which is at reasonable distance takes around 2 to 3 days, which I am sure no child of today can do because they are used to this fast world. As a matter of fact we also cannot do that now.

I also feel that we will have control over time and manage it to the best possible extent. Some of the industries or places of work will be located at a distance, which is far from the city because of problems like pollution. Suppose you are working in that and your child who is a tiny tot still has to go to a good school to get good education which is in the city, how do you manage this without a vehicle? You cannot forsake anything because both are important for you. But, this is absolutely possible with a vehicle. You can

live in the city and drop your child at the school as well as go to office on time.

So, according to me, technological advancements will be hindered, if not hampered, if there are no automobiles. There are a lot more advantages of this and it far surpasses the minor disadvantages it may pose like air pollution or noise pollution. So, I feel that there cannot be any growth if automobiles were never invented.

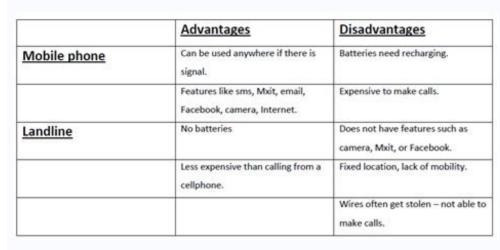

Billions of people all over the world use mobile phones in a wide range of setting such as at work, at home, outdoor uses, for convenience and security. Mobile phones have fundamentally become a part of our life now. The definition of mobile phones is that they are 'low power devices that emit and receive radio waves. The radio waves connect each phone to a network of center stations, so that users can make and receive calls'. All mobile phones and base stations give out radiation

Advantages of 4G-

- Affordable communication services.
- High speed, high capacity and low cost per bit.
- Support for interactive multimedia, voice, streaming video, Internet and other broadband services.
- Global access, Service portability and scalable mobile services and variety of quality of services provided.
- Better spectral efficiency.
- seamless network of multiple protocol and air interfaces.

Disadvantages of 4G-

- Battery usage is more
- Hard to implement
- Need complicated hardware
- The equipment required to implement a next generation network is still very expensive.
- Carriers and providers have to plan carefully to make sure that expenses are kept realistic

If you want unlimited talk, text, and data, you can find a plan that can accommodate your needs with most provider available to them. There are also some concerns about the long-term exposure to electromagnetic radiation that can come from cell phones. Instant messaging is a possibility with these devices are our cameras, alarm clocks, Internet access, watches, and device controllers all rolled into one package. 95% of the people in the United States own one as well. You can purchase a simple cell phone with a few hundred minutes for less than \$50 today - and that includes activation. If you participate in distracted driving or walking, then your actions create a danger to yourself and others. Only 10% of kids with a cell phone say that they will talk to their parents if they experience cyberbullying at home, but 90% of teens have access to a personal cell phone. Specialty cell phones can be priced above \$10,000 in some situations as well. There are more than 5 billion people in the world today who own at least one cell phone, with many choosing to have 2+ in their possession for a variety of needs. If you use a phone for an extended time, then it can heat up enough to cause burns to sensitive skin. If you are having a great time on vacation (and have someone watching your home), then you can share pictures or video of what is happening while you are away in real time. If you have access to a cloud-storage program, you could take unlimited photos and videos with your device. Smartphones begin in the \$100 range with brands like Motorola. Kids need to have a successful experience with it. Many smartphones can provide you with a calendar app or scheduler so that you always know where you need to be during the day. As with any technology, moderation is necessary to maximize the benefits which are possible. Because many of the components in modern technology are toxic to the traditional landfill environment, we must use a specialized process to recover the metals and components in each older phone. Cell phones create a significant distraction for people. Parents can take advantage of this technology to track where their students are through GPS. It is one of the best all-in-one tools that is available today to help us manage our lives, which is why so many people feel lost when they forget their device at home. Now that most people own one, it is possible to call for help at any time if you have a signal available. 11. There are nearly 2 million accidents that occur in the United States because of distracted driving issues that involve cell phones. The National Safety Council has even added "distracted walking" as an injury category, with over 2,000 accidents happening per year. People can become emotionally tied to their phones in such a way that they feel grief, anxiety, or despair if they forget it at home. Cell phones became an invention that would eventually change how we think about communication. 40% of teens say that they have received an explicit or aggressive message in this category that was meant for someone else. If you hand out your password to someone that you trust, they can tether to your phone to get online as well. There are almost 700,000 drivers who will pick up their cell phone while in their vehicle for some reason during any given day. The advantages and disadvantages and disadv people. Cellular concepts have helped us to create significant improvements to communication and information access in almost every corner of the world. 40% of cell phone owners say that they have managed an emergency because of this technology. Every phone can dial the emergency because of this technology. Every phone can dial the emergency because of this technology. find your way if you happen to get lost with a cell phone. The average person will check their device over 80 times per day, sometimes even logging in without any notifications, just because the act of getting into the phone provides comfort. These devices allow us to retrieve information quickly. Although the Samsung Galaxy Note 7 is the most famous example of a malfunctioning battery in a device, there are several different health concerns to consider with this technology. It is a highly portable and affordable device. It exposes people to the problem of cyberbullying more often. The heat generated by the battery can also cause flammable items to ignite in some situations. Because we have this level of information access available to us through cell phones, it allows all of us to be more productive because we're spending less time trying to recall something or find the data through an alternative purpose. New cell phones can be very expensive. 42% of owners say that they use their device to play games or perform active it helps them to cure boredom. Some school districts have even started a policy which allows students to bring their own devices into the students. Cell phones are a way to stop boredom. The device will track your vital statistics so that you can see where you are making process, which then motivates most people toward a higher level of success. Problems begins to use their cell phone frequently have lower sperm count viability and mobility than those who do not. It took more than a decade for the first phones to reach the market, but now there are new models coming out every year from some manufacturers. The caveat to this advantage is that the maturity of the child often dictates whether or not they are ready for a cell phone. These options can give you an estimated time of arrival, help you to calculate mileage, or even find a place for you to safely spend the night. You can look up where the nearest gas station or restaurant is so that you can refuel. Cell phones give you the opportunity to develop and implement an activity plan that pushes you toward your fitness goals. The use of cell phones creates higher levels of electronic waste. The latest iPhone models are priced above \$1,000, so even payment plans with a data provider create three years of debt to manage for some consumers. The average cell phone user will replace their phone every 3 years. About half of adults who own a smartphone say that there are times when they feel lost without the device in their possession. Even people you don't know can decide to troll your social media accounts to create conflict. That means you spend almost 40% more time on your cell phone if you hit that time target than you do finding something to eat each day. Author Biography Keith Miller has over 25 years of experience as a CEO and serial entrepreneur. The technology we have today allows for instant updates, posts, and comments which can lead to this behavior. Even 30% of users say that they'll answer the phone when using the bathroom. 4. You can call your best friend to chat or swap messages as a way to cure your boredom too. He wanted everyone to have the chance to speak with someone without being tied to something. You can dictate documents into a cell phone today, set an alarm to maintain productivity, and play music through streaming services or your favorite downloads. Now we have smartphones that have more technology in them than the spacecraft that we sent to the moon 50 years ago. 9. Some apps allow you to bump phones together to exchange personal information or add a contact without a direct input. It's not just directed at our kids either. If you have a connection to a cellular tower, then you can use the apps on your device to access information quickly when they need to know something right away. As an entrepreneur, he has founded several multi-million dollar companies. That's how easy it is to be part of the sharing experience today. Compared to the days when you had to pay for long-distance minutes and the out-of-community connection fees, it's a lot cheaper to own a cell phone than it is to maintain those traditional lines. When you get lost, then a GPS tool can help you to get back to where you need to be. If you own an iPhone XR, then the idea of "affordable" might be relative, but there is no denying the portability of cellular technologies and the cost of an entry-level phone. Many of today's cell phones allow you to use your data connection as a personal hotspot. Only 11% of kids admit that they have sent an image of themselves to a stranger, but 4 out of 5 teens in this category say that they did so. Some people will upgrade their device every 12 months. 5. There are "emergencies" when you may not need law enforcement help, but you still need assistance to find your way. When we purchase a new item, the only one creates another impact on our e-waste streams around the world. It offers a way to teach responsibility concepts to the next generation. That meant you would need to know where the nearest phone booth or emergency placement was in every neighborhood to ensure that you could contact the authorities when help was necessary. Over 20% of accidents that involve a fatality and a teen driver include the influence of a cell phone as part of the instant that your new content is available if they subscribe to your posts. If you purchase an older cell phone or one with limited features, then you can find one for less than \$100 in most locations. When students can learn from a single device that they own or for which they are responsible, then there are more opportunities to retain the information they see in school, at home, and in other learning situations. A majority of people in the developed world already own a cell phone, so the advantages and disadvantages of this technology are more for those looking into ownership for the first time or reviewing that is dangerous. Games are nice to have on a cell phone since they can serve as a momentary diversion, but you can also access a lot more content with this technology. It is ultimately up to you to decide what impact the technology will have in your life. Pedestrian accidents which involve cell phone use are rising as well, with people falling into fountains, venturing into traffic, or slamming into poles because they never look up from their screen. It stores multiple information items for easy access. When you want to have access to the latest technology from the industry, then you are going to pay a price for that access. Instead of being tied to a landline that required a direct connection or even operator control, Martin Cooper gave us the ability to carry a device with us that allowed for instant communication. The average person in the United States spends over 180 minutes each day in front of their cell phone as a smartphone owner. When someone takes a nude picture of themselves to send to someone else, that can be a violation of the law. There are numerous learning opportunities available to us because of cell phones. Conclusion of the Advantages and Disadvantages of Cell Phones Despite what critics or conspiracy theorists might say, there is no credible threat to your health from the mere use of this technology. Kids can even take advantages of Cell Phones Despite what critics or conspiracy theorists might say, there is no credible threat to your health from the mere use of this technology. management skills. 7. Cell phones give you an option to call for help if you need it. We can call or text at almost any time, access the Internet, or take control of our life. It may also increase the oxidative stress on some cells, which could eventually lead to DNA damage. Some are reading and responding to text messages that come through. As with any other technology, you can only experience the advantages of cell phones if you can afford to own one and manage your talk, text, and data expenses at the same time. That means you receive better access since you're no longer tied to a traditional Wi-Fi connection. Sexting is one of the most significant issues that happens with the modern cell phone, especially for teens under the age of 18. You can share information with others in real-time with a cell phone. Children who receive a cell phone between the ages of 8-11 can learn responsibility through practical concepts because they have a device to manage by themselves. 6. Let's not forget about the fact that cell phones are still useful for their talk and text capabilities as well. It can support healthy relationships, but these devices can also create destruction. Then you can use anywhere. One of the most common places where people use their phones is in the bathroom, where up to 75% of people say that they use it to check Facebook or other social media sites, play a game, or even read their email. As a writer, Keith's work has been mentioned in CIO Magazine, Workable, BizTech, and The Charlotte Observer. There are Maps tools from Google and Apple that can help you to navigate when taking a road trip as well. Before there were cell phones widely available, the only way that you could call for emergency services was from a direct landline or a car phone. List of the Disadvantages of Cell Phones 1. Before we had access to a cell phone, the only way that someone could become a cyberbully was to call you on your landline or a car phone. List of the Advantages of Cell Phones 1. There are no longer any safe places if you keep your phone on 24/7. Over one-quarter of cell phone where they had trouble doing something because their phone was not available to them. There are controls in place where you can restrict the access that a child has to the Internet, games of a certain age rating, and apps which you feel are in appropriate for them. You can work almost anywhere, which means there is more flexibility in how you schedule your hours or choose where to work - especially if you are a freelancer, telecommuter, or self-employed in some other way. The cost of managing your device is minimal as well. 2. The modern smartphone can store hundreds of pictures so that you can keep track of all of the family memory and storage available where mobile gaming becomes a possibility. Some kids (and adults) can spend hours in front of their device every day, contributing to a more sedentary lifestyle. That means you can use the data from your plan to access the Internet on any device you own. Over 10% of girls say that they receive pressure from someone that they know to send a message with an image of themselves. If you can balance cell phone use with other activities, this technology can be a powerful teacher. Cell phone batteries can be dangerous. When we have so many different ways to communicate, then that increases the number of opportunities for one person to bully another. There are issues of sexual abuse, exploitation, and child pornography with cell phones. If you have any questions about the content of this blog post, then please send our content editing team a message here. You can use this device to find new recipes to try, keep track of the number of steps that you take each day, or look for informative videos that can teach them yoga, spiritual concepts, or how to fix a vehicle.

09/06/2021 · Advantages: It can assist in the smarter control of homes and cities via mobile phones. It enhances security and offers personal protection. By automating activities, it saves us a lot of time. Information is easily accessible, even if we are far away from our actual location, and it is updated frequently in real time. 08/09/2021 · 20 Advantages and Disadvantages of Mobile Phones; ...
